

Porthtowan Temporary Windbreak Fencing Proposal

Where will the windbreak fencing be put?

The lines of windbreak fencing (the brown line) run across the dune and allow a space between the fences for the sand to deposit. The fencing will go in hand with vegetation planting as this is the best way of stabilising the loose sand, the fencing will help slow the movement of sand and create a better environment for plant growth.

What will the windbreak fencing look like?

The windbreak fencing needs to be robust and durable. Plastic fencing is readily available but in a limited range of colours. The fencing being used will be **dark green**. Other materials could be used but would present other future management challenges.
